Diesel Emissions Fluid (DEF) Dispensing System

Clawson Tank Company has developed a Diesel Emissions Fluid (DEF) Dispensing System to help you meet the stricter EPA 2010 emissions standards. Freight, transportation and municipalities that own, manage or service on-road diesel fleets can use this system to bring their vehicles into compliance today.

The DEF Dispensing System is a truly flexible system for the transport, storage and discharge of the urea solution. Available in 275 gallon or 330

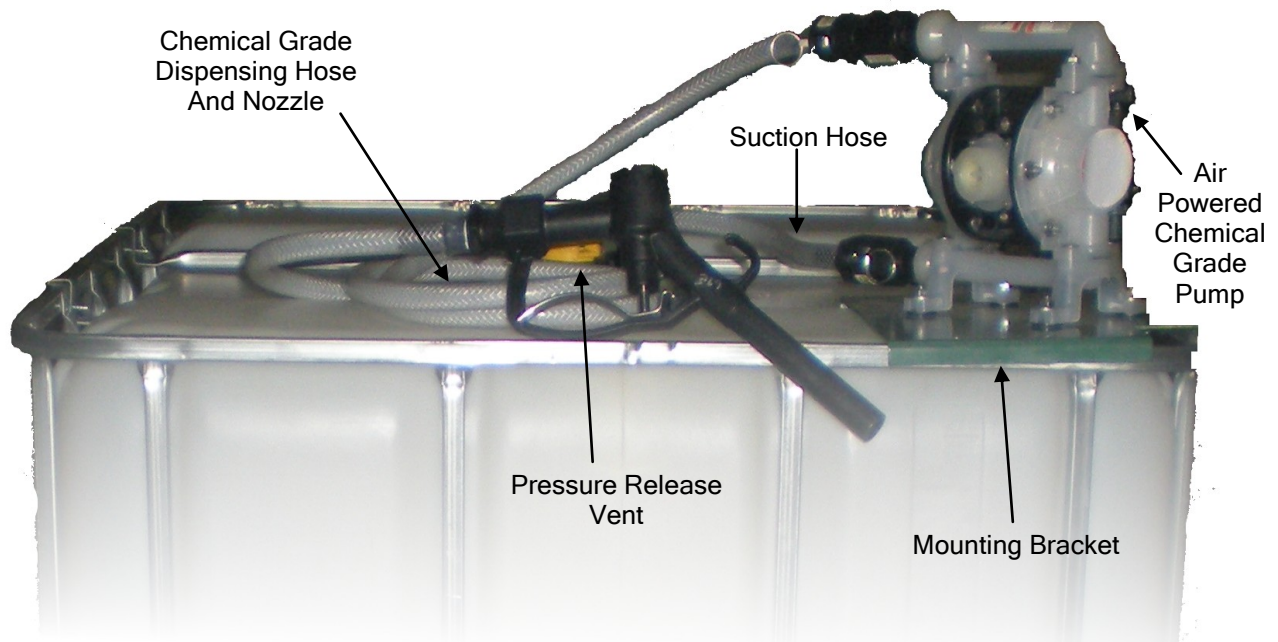

gallon capacities, this system is designed for on-demand dispensing.

The package includes an air powered pump, easy pump mount bracket, suction hose, dispensing hose, nozzle and pressure relief vent. A digital dispensing meter can also be added to the package so you know the amount of solution that is being dispensed.

The DEF system is easy to install and you will be able to get up and running in no time at all.

Clawson Tank Company has over 60 years of experience in the petroleum industry. The Passport DEF Dispensing System emphasizes our commitment to helping our customers with solutions to meet on-going regulatory challenges.

Learn more about this dispensing system today. Contact your Clawson Tank Sales Representative.

Passport IBC

Diesel Emissions Fluid (DEF) Dispensing System

The digital meter can be added to the DEF Dispensing System package to give you accurate readings when dispensing the urea solution. "Retail Approved" meter available.

The Passport storage unit is available with several different pallet styles including a steel pallet with a bonded plastic bottom ring to prevent gouging and scuffing of the floor surface.

Storage units are in stock and ready for delivery.

What is DEF?

Diesel Emissions Fluid (DEF), a urea solution, is used in conjunction with a Selective Catalytic Reduction (SCR) converter, which will react with the diesel exhaust resulting in a chemical breakdown producing plain nitrogen and water vapor.

Why do I need to know this?

In 2010, the stricter EPA standards will be in place, and enforcement will begin. DEF and SCR systems bring diesel emissions in compliance with these new standards.

Why Clawson Tank Company?

Clawson Tank has been servicing the petroleum industry since 1946. We have designed an efficient and economical dispensing system that helps you maintain your fleet of diesel vehicles.
