Product Innovation - Plastic Bonded Pallet Ring

IBC North America's Plastic Bonded Pallet Ring

IBC North America is now offering a plastic bonded pallet ring as an option on steel pallet IBC's. The plastic, based on military technology, is bonded to the steel pallet ring and designed for rugged use.

If you are looking for the structural strength of a steel pallet, but are also concerned over floor scuffing and gouging, then this is the answer. Contact your IBC Region Sales Manager today for more information and a quotation.

BENEFITS

- When handling with a fork truck, a steel pallet IBC is less likely to slip or slide when compared to a poly pallet IBC.
- The plastic bonded pallet ring on a steel pallet is less expensive than that of a poly pallet.
- Even poly pallets can leave black scuff marks on flooring, our plastic bonded pallet ring will not.
- A steel pallet is structurally stronger than that of a poly pallet.
- The bonded plastic on the pallet ring provides better interlocking of the IBC when stacked.
